Professional Summary

Innovative final-year Software Engineering student with a CGPA of 3.69 and strong technical skills in full-stack development, system architecture, software testing, and AI integration. Proficient in React, Next.js, Python, C#, and SQL, with hands-on experience in predictive modeling, robust API development, and cross-platform design. Proven developer with experience managing full software development lifecycles, coordinating complex databases, and integrating IoT hardware. Recognized for strong problem-solving, analytical thinking, and delivering high-impact outcomes like the ReflectaAI Smart Mirror Hub. Passionate about applying software engineering and AI expertise in real-world, collaborative environments.

Education

Bachelor In Software Engineering (Honours) Universiti Selangor, Bestari Jaya (UNISEL) Current CGPA: 3.69 (Dean's List Award Recipient throughout the study)	Expected 2027
Foundation In Information Technology Universiti Selangor, Bestari Jaya (UNISEL)	Completed 2023
Sekolah Menengah Kebangsaan Tun Perak, Rawang Sijil Pelajaran Malaysia (SPM) Result: 1(A-), 3(B), 1(C+), 3(C), 1(D)	Completed 2021

Technical Skills

- Programming Languages:** Python, TypeScript, JavaScript, C++, C#, Java (Android), Dart, PHP, SQL, HTML, CSS, Assembly language
- Web Development:** React, Next.js, Node.js, FastAPI, Flask
- Mobile & IoT:** Flutter, React Native, Native Android, Raspberry Pi 5, Smart Home Technology Integration
- AI & Automation:** Facial Recognition, Voice AI Integration, Machine Learning, Predictive Modeling, Data Analysis (pandas), Automated Grading & Enrollment Logic
- Databases:** MySQL, SQLite
- Core Competencies:** Advanced Data Structures (AVL, BST, Linked Lists), Software Testing & Quality Assurance (Integration Testing, V-Model, Static Testing), Full-Stack Development, API Integration, Object-Oriented Programming (OOP), Systems Architecture, SRS, SDD

Relevant Projects

Final Year Project: ReflectaAI Smart Mirror Hub	2026
Tech-Stack: Raspberry Pi 5, Python, FastAPI, React, Facial Recognition, Voice AI	
- Developed an AI-powered IoT smart mirror system using a Raspberry Pi 5 to facilitate highly personalized, interactive user experiences. - Integrated advanced facial recognition and conversational Voice AI modules to enable real-time user identification and hands-free assistance. - Engineered an AI-powered virtual fitting room module, seamlessly blending hardware customization with advanced computer vision capabilities.	

Project Student Management System

2026

Tech-Stack: C#, .NET, SQL Server, Visual Studio

- Developed a desktop application management system using C# and .NET Framework to streamline Final Year Project processes for students and supervisors.
- Designed and implemented a relational database using SQL Server to manage user accounts, project information, submissions, and progress records.

Heart Disease Prediction System

2026

Tech-Stack: Python, pandas, Streamlit, Machine Learning, Data Analytics

- Developed a machine learning-based diagnostic application utilizing the Cleveland heart disease dataset to predict cardiovascular risk factors.
- Built and optimized predictive modeling pipelines using Python and pandas for robust data preprocessing, feature engineering, and statistical analysis.
- Designed and deployed an interactive user interface using Streamlit to provide accessible, real-time health data visualization and predictive insights.

Final Year Project: PizzaRia Food & Blackjack App

2025

Tech-Stack: Kotlin/Java, Android SDK, Firebase Authentication, Firebase Realtime Database, XML ViewBinding

- Developed a multi-functional Android application that creatively integrates a comprehensive pizza ordering system with a fully playable Blackjack card game.
- Integrated Firebase Authentication and Realtime Database to enable secure user registration, seamless data persistence, and real-time food order tracking.
- Engineered a custom Blackjack game module and dynamic UI layouts using ViewBinding and RecyclerView to ensure a smooth, engaging, and responsive user experience.

Smart Parking System

2025

Tech-Stack: Raspberry Pi, Camera-Based Detection, Web Development, Systems Analysis

- Engineered an automated, camera-based smart parking solution utilizing a Raspberry Pi to monitor real-time parking space availability for LOTUS supermarket employees.
- Developed an interactive online portal enabling staff to view live parking status, book spots, and receive notifications, while providing administrators with comprehensive system management controls.
- Conducted extensive requirements analysis, user testing, and interviews to deliver a space-efficient system that minimizes traffic congestion and significantly reduces time spent searching for parking.

Certifications and Training

- Hack The Flag Universiti Selangor 2025
- SmartStart Machine Learning 2025
- Ai Next Workshop 2025
- 5th International Innovation, Technology & Research Exhibition and Conference 2025 (iTREXC2025)
- Innovation Challenge 2026 (InnoGen'26)
- International Research and Innovation Symposium Competition 2026 (RISE2026)
- Top Coders - Coding Challenge 2026
- Universiti Selangor Final Year Project Showcase 2026

Leadership and Involvements

Persatuan Mahasiswa Teknologi Maklumat (PEMATEK) UNISEL

2025

Exco Webmaster

- Managed and maintained the society's official web platforms to ensure timely updates for IT workshops, seminars, and tech events.
- Developed digital assets and interactive media to drive online student engagement and digital publicity.
- Oversaw digital campaigns and provided technical support for web infrastructure during university programs.

Program Director, Innovate & Illustrate Workshop (SMK Pengkalan Permatang)

2025

- Directed a comprehensive educational initiative aimed at introducing high school students to the intersection of digital creativity and technology through project-based learning.
- Managed the CanvaSmart module, facilitating the creation of interactive graphics, educational posters, and digital presentations to enhance visual communication skills.
- Spearheaded the IoT4U module to foster interest in computer science and automation, guiding students in developing hands-on smart technology projects such as smart home security, automated plant watering, and vehicle plate detection systems.

Awards

-
- First Place, Hack The Flag Universiti Selangor 2025
 - Gold Medalist, Parking Spotter - IoT-Based Smart Parking System, 5th International Innovation, Technology & Research Exhibition and Conference 2025 (iTREXC2025)
 - Bronze Medalist, Final Year Project 1: ReflectaAI Smart Mirror Hub, Innovation Challenge 2026 (InnoGen'26)
 - Silver Medalist, Final Year Project 2: ReflectaAI Smart Mirror Hub, International Research and Innovation Symposium Competition 2026 (RISE2026)
 - Third Place, Top Coders - Coding Challenge 2026
 - Third Place Bronze Award, Universiti Selangor Final Year Project Showcase 2026

Languages

-
- Bahasa Melayu: Native / Bilingual Proficiency
 - English: Professional Working Proficiency
 - Mandarin: Professional Working Proficiency
